openIDL Homepage

Welcome to the openIDL wiki Homepage

openIDL (open Insurance Data Link) is an open distributed ledger (DLT) network that streamlines regulatory reporting and provides new insights for insurers, while enhancing timeliness, accuracy, and value for regulators. openIDL is the first platform to enable the efficient, secure, and permissioned-based collection and sharing of statistical data.

If you are interested in getting involved with openIDL, please consider this your invitation. We welcome contributions and are happy to welcome you into the community. There are a few ways to participate, check out the links below for more details and please be sure to follow our Linux Foundation Code of Conduct when participating.
